

# **Implant Course Description & Outline**

## **“Dental Implants In the Expanded Services Dental Practice...The New Standard of Care”**

**Mark A. Iacobelli D.D.S., F.A.G.D., F.I.C.D., M.I.I.F.**

### **Course Description**

This course is for general dentists who want to integrate both the surgical and restorative phases of dental implants into their daily practice. Patient selection, site selection, treatment planning, critical anatomic structures, surgical placement protocols as well as restorative options with the Camlog implant system are presented and discussed. Doctor participation can be a reality with site preservation, site augmentation, technique mandible implant placement, suturing techniques, and prosthetic pieces and parts should they desire in a “break-out” room. To “bring it all together” during the second day of the Symposium, videos and/or live surgeries are viewed and discussed as group to reinforce the skills presented thus far.

### **Course Outline**

#### **Early Morning**

- Introduction to Implants as a General Practitioner
- The History of Implantology
- The Implant Environment

#### **Late Morning**

- Osseointegration
- Implant Patient Demographics
- Camlog System Overview
- Camlog Placement Protocol

#### **Early Afternoon**

- Patient Selection
- Site Selection
- Prosthetics as it relates to Treatment Planning
- Camlog Removable Solutions
- Camlog Fixed Solutions

#### **Late Afternoon**

- Bringing it all Together
- Treatment Planning Review
- Pre-Surgical Preparations
- Surgical Protocol Additions
- View Surgical Video and group discussion
